MAKE WORK FLOW

STAND ALONE

STAND ALONE

The STAND ALONE series is designed for operations requiring handling of pallets at floor height.

The Palomat can be freely located and adjusted to the procedure that is most efficient for the employees.

The Palomat is a natural part of a production, a store, a packaging department – all places where there is a need for stacking or destacking pallets.

FLEXOMATIC

Automatic stacking and destacking of pallets using a touch panel that is located on the side of the Palomat. The Palomat registers the pallets via a photo sensor after which the pallets are stacked or destacked one by one according to the wishes of the user.

FLEX

Manual stacking and destacking of pallets using a joystick that is located on the side of the Palomat. When the pallet is located in the Palomat, the user should operate the Palomat manually, after which the pallets are stacked or destacked one by one according to the wishes of the user.

PALOMAT 001

Automatic stacking *or* destacking of pallets using a touch panel that is located on the side of the Palomat. The Palomat registers the pallets via a photo sensor after which the pallets are stacked or destacked one by one according to the wishes of the user.

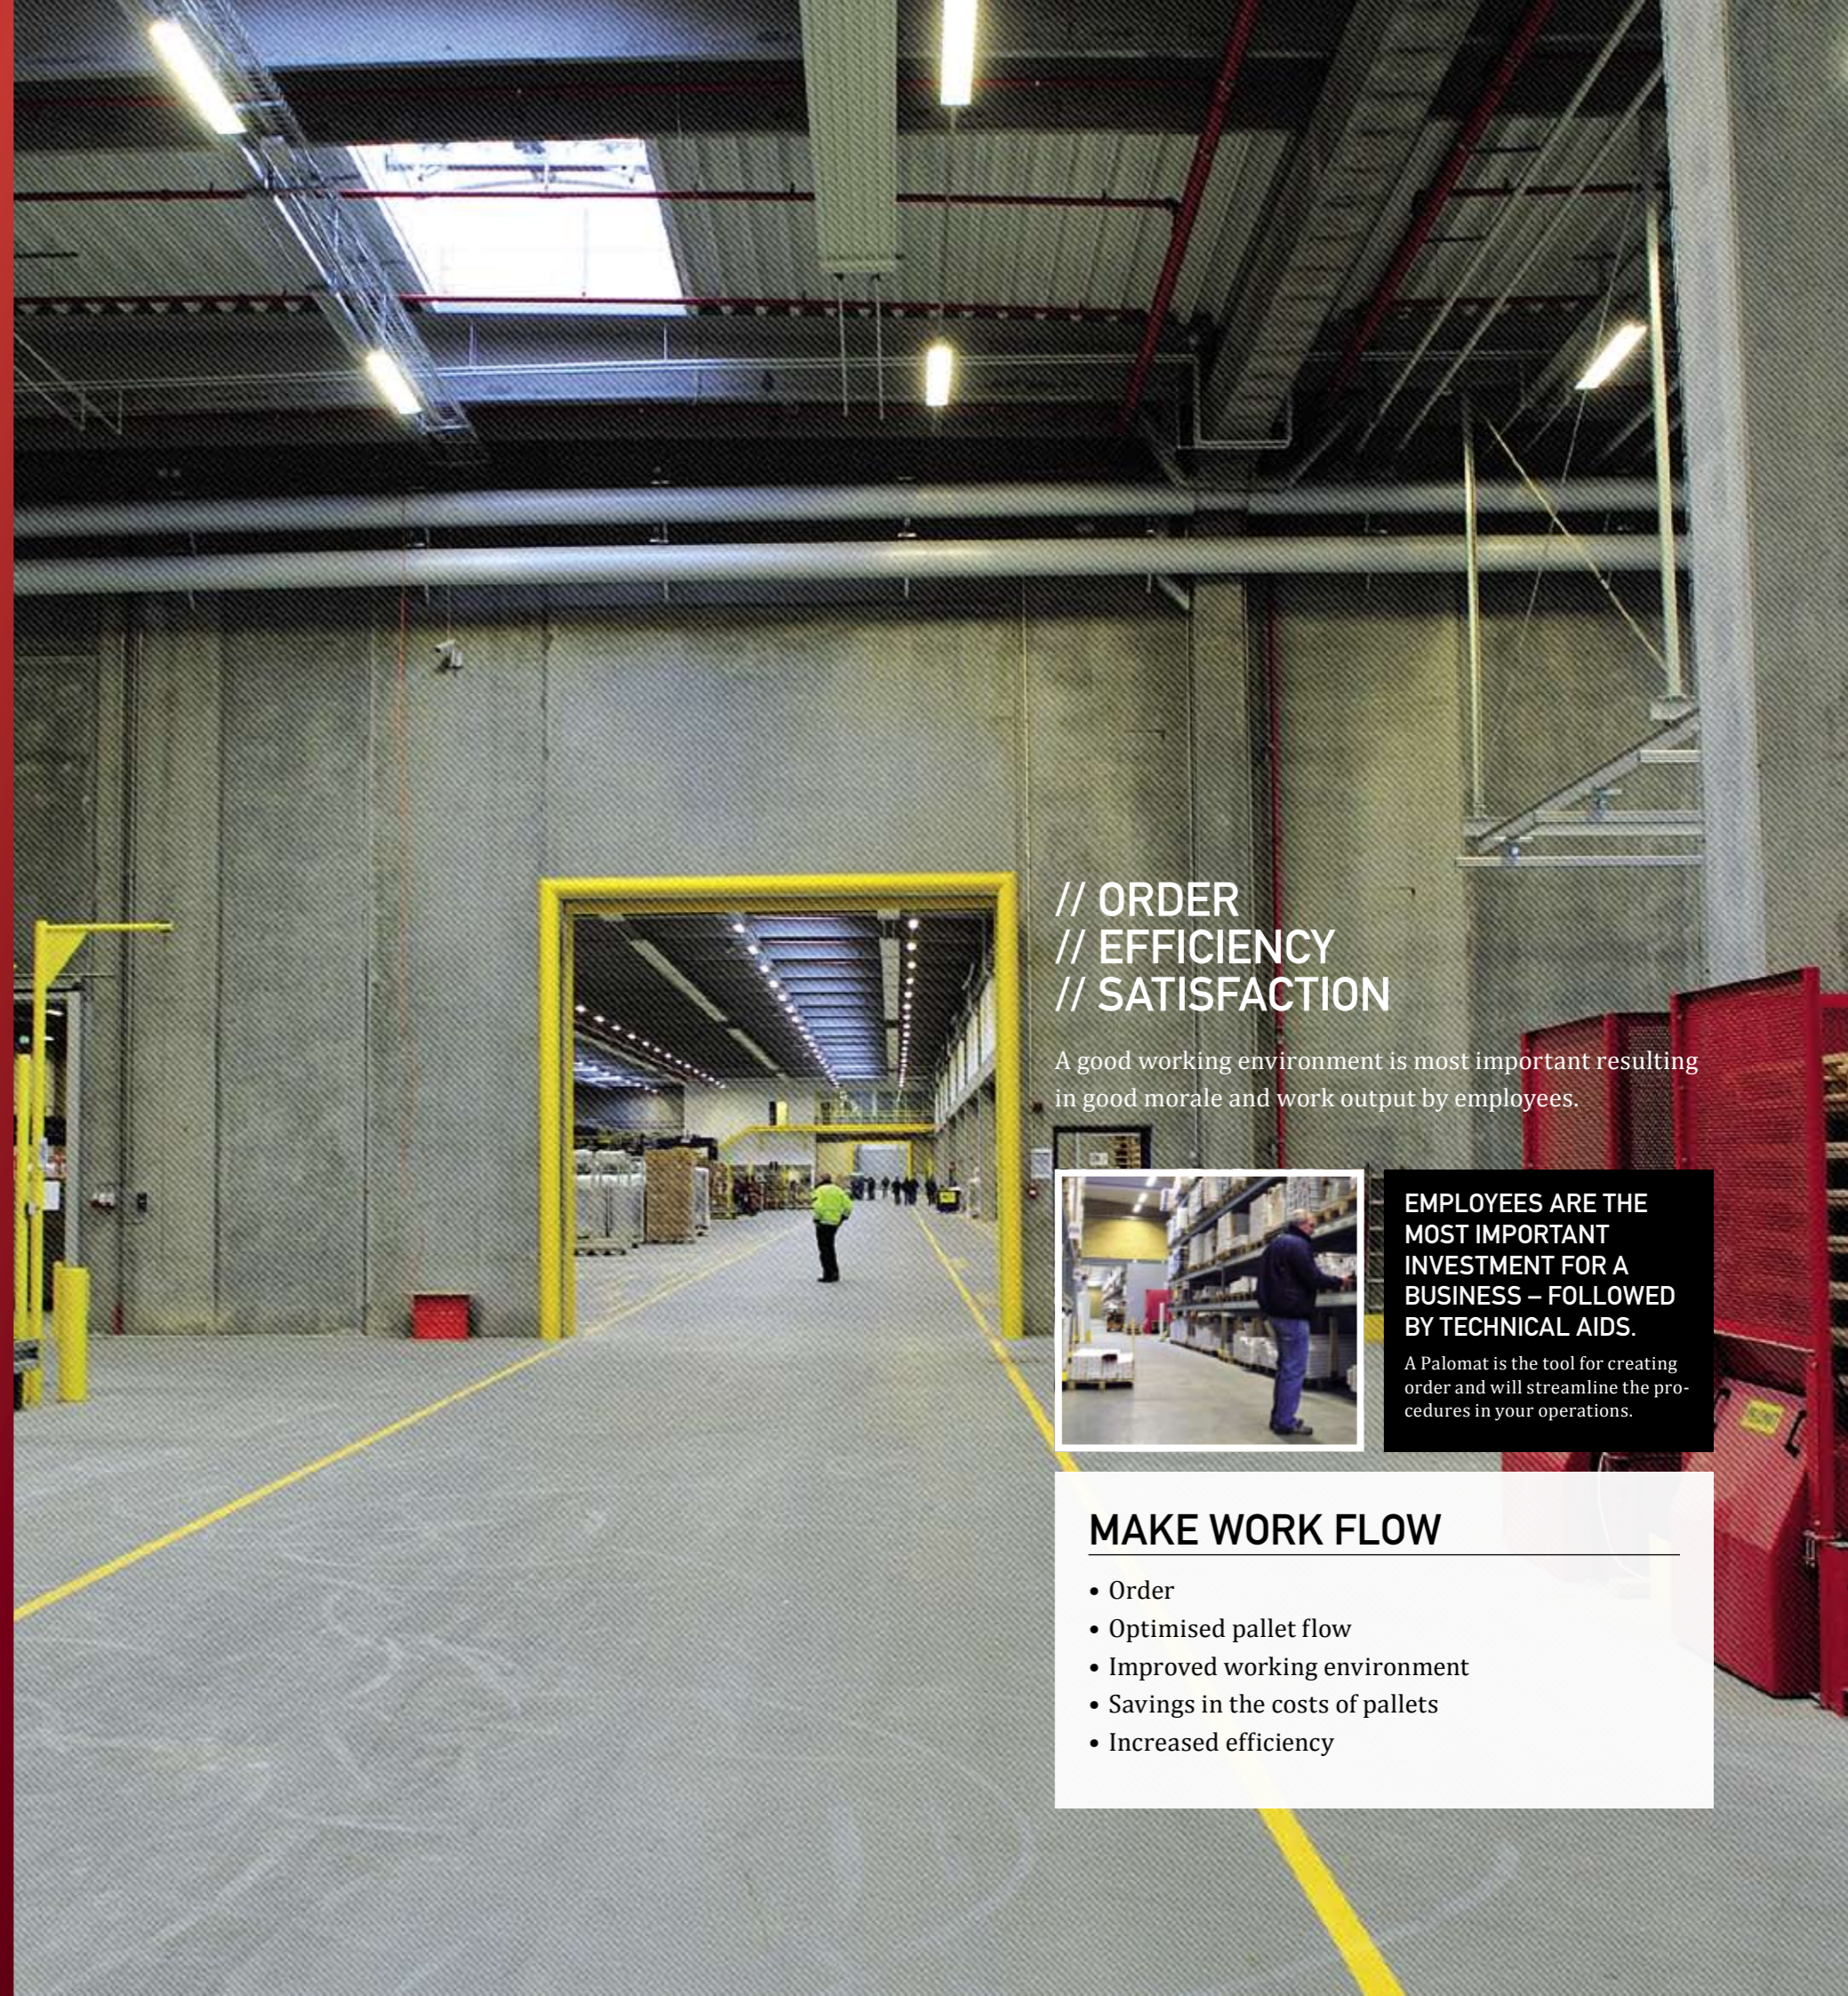

PALOMAT 5

Semi-automatic stacking and destacking of 1-5 pallets at a time using a pushbutton. The Palomat is activated manually each time it is to perform a function. The Palomat itself detects if it is to carry out a stacking or destacking operation.

MAKE WORK FLOW

You can read more about the different types as well as accessories on www.palomat.com.

// ORDER
// EFFICIENCY
// SATISFACTION

A good working environment is most important resulting in good morale and work output by employees.

EMPLOYEES ARE THE MOST IMPORTANT INVESTMENT FOR A BUSINESS – FOLLOWED BY TECHNICAL AIDS.

A Palomat is the tool for creating order and will streamline the procedures in your operations.

MAKE WORK FLOW

- Order
- Optimised pallet flow
- Improved working environment
- Savings in the costs of pallets
